

PAIR WITHOUT C

$$E(AB) - E(A) - E(B) + E(\text{empty})$$

Same pair; C absent

PAIR WITH C

$$E(ABC) - E(AC) - E(BC) + E(C)$$

Same pair; C present

TRIPLE = CHANGE IN THE PAIR

Pair with C minus pair without C

$$m_E(ABC) = I(AB \mid C) - I(AB \mid \text{empty})$$

Lower-order terms are subtracted before naming the remainder.

FOURTH ORDER = CHANGE IN THE TRIPLE

Compare the same triple with and without D.

Continue recursively for higher orders.

One complete, common-baseline table throughout.
